

ABSTRACT OF THE DISCLOSURE

- 5 A cleaning brush device for preventing fatigue to the hand while cleaning. The cleaning brush device includes a panel having a top surface, a bottom surface and a peripheral edge extending between the top and bottom surfaces. A plurality of bristles is attached to and extends away from the bottom surface of the panel.
- 10 A gripping member is attached to the top surface. The gripping member extends upwardly from the top surface in an arcuate manner. The gripping member is contoured to the general shape of a hand.
